- SPDEDBINIT 8
- SPDEDBSHUT 11

What is Speed Demon?

Speed Demon

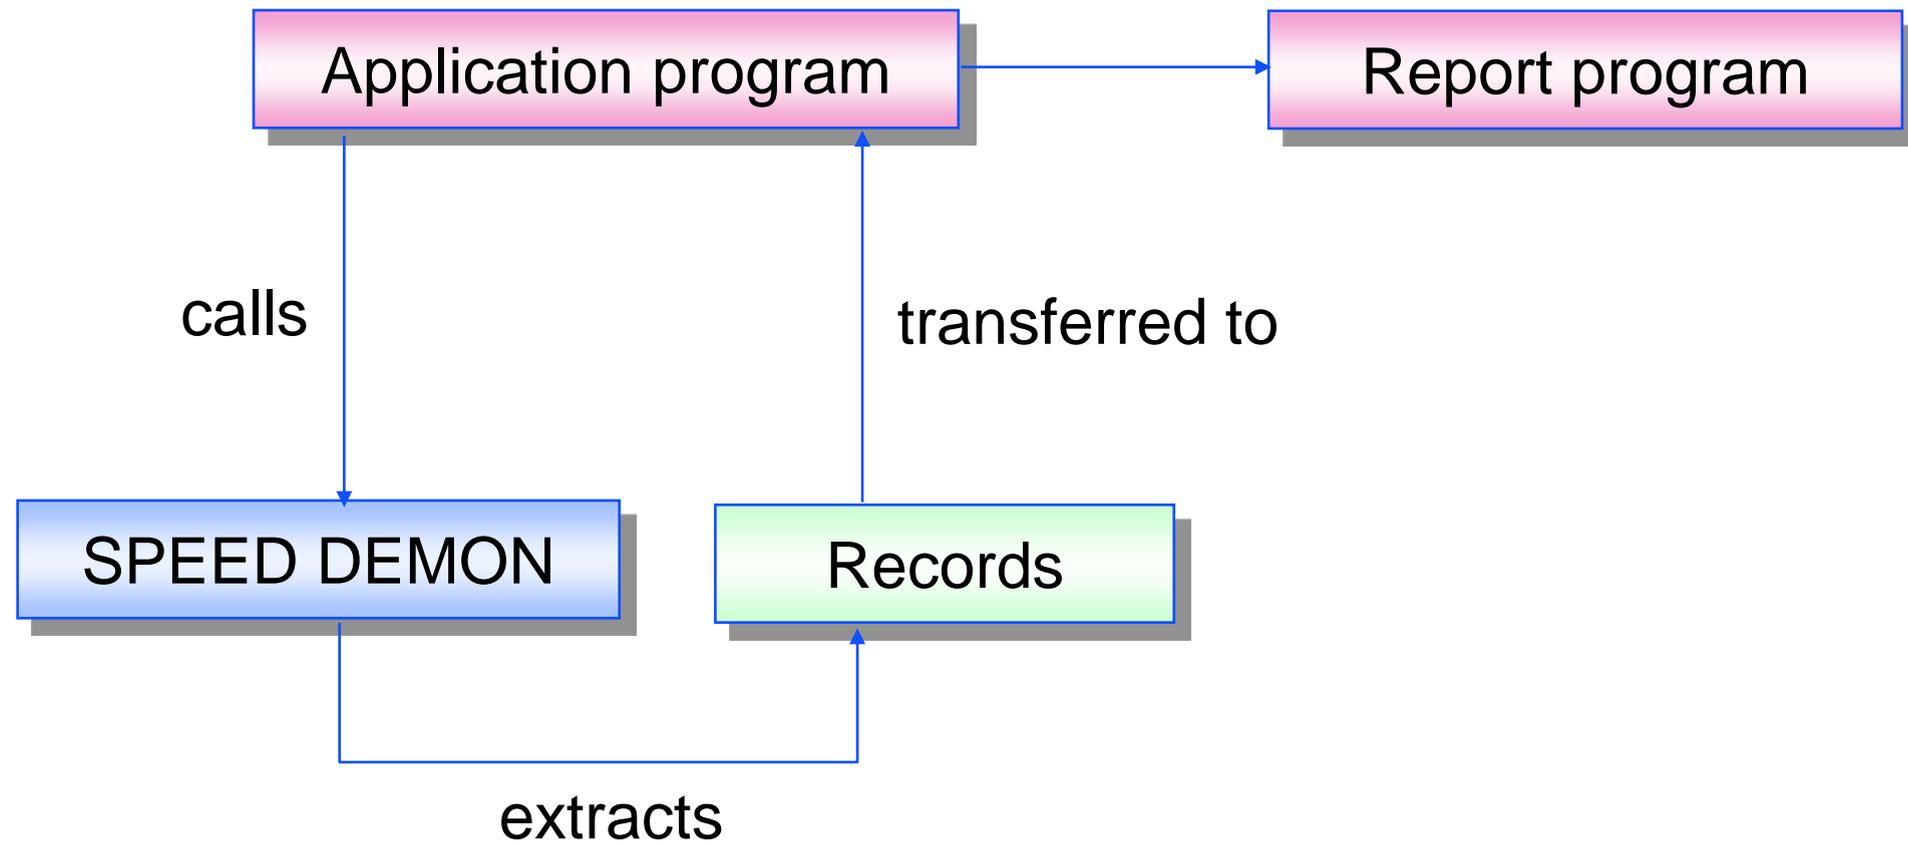

- Reads records sequentially
- Same as serial DBGET for user programs
- Useful when you want to extract more than 50% of a dataset
- Works best in 3G languages, such as COBOL, Pascal and FORTRAN

Comparing Speed Demon and Suprtool

- Suprtool is a stand-alone utility program
 - Selects, sorts, and extracts records
 - Puts extracted records in an output file
 - Output is available to application programs for further processing

- Speed Demon is an intrinsic library
 - Extracts records
 - Cannot select or sort records
 - Moves extracted records directly to the application program

Extracting records

Versions of Speed Demon

- Compatibility mode (CM) version on MPE V
 - Faster than DBGET
 - Slower than Suprtool
 - Uses a small amount of stack space

- Native mode (NM) version on MPE/iX
 - Faster than DBGET
 - As fast as Suprtool

Speed Demon intrinsics

- SPDEDBINIT selects dataset and field list
- SPDEDBSCAN replaces calls to DBGET mode-2
- SPDEDBSHUT cleans up after dataset scan
- SPDEEXPLAIN prints error messages

SPDEDBSCAN replaces DBGET mode-2

SPDEDBSCAN intrinsic

- Has similar parameters to DBGET, but without NO SET, MODE or LIST options
- Must call SPDEDBINIT before SET and LIST
- Mode-2 serial access is always assumed

SPDEDBINIT selects dataset and field list

SPDEDBINIT intrinsic

- Mode-1 returns the entire record
- Mode-2 allows you to specify a list of field names
- Required before each SPDEDBSCAN
- Scans only one dataset at a time
- Requires database opened with DBOPEN command

SPDEDBINIT in mode-1 returns complete record

```
□ Call "SPDEDBINIT" using db-base
                        db-set-d-sales
                        db-mode-1
                        db-status-area
                        spde-db-control
                        db-dummy-arg.
```

```
01 spde-db-control.
```

```
05 spde-db-version      pic s9(4) comp value 0.
05 spde-db-buffer       pic s9(4) comp value zeroes.
05 spde-filler          pic x(20) value spaces.
```

SPDEDBINIT in mode-2 returns specific fields

- Speed Demon accepts all valid TurboIMAGE field lists except "*" list

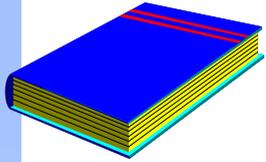

- Move "CUST-ACCOUNT,PRODUCT-NO, PRODUCT-PRICE;" to db-list-d-sales.

- Call "SPDEDBINIT" using db-base
db-set-d-sales
db-mode-2
db-status-area
spde-db-control
db-list-d-sales.

SPDEDBSHUT cleans up after DBSCAN

SPDEDBSHUT intrinsic

- Mode-1 closes the database
- Mode-2 closes the database and prints a performance report
- If omitted, will cause next SPDEDBINIT to fail
- Call "SPDEDBSHUT" using `db-base`
`db-set-d-sales`
`db-mode-1`
`db-status-area`
`spde-db-control`
`db-dummy-arg.`

Summary

- Replacement for DBGET mode-2
- Intrinsic
