Introducing Suprtool Version 5.5.04

Introduction

Suprtool provides fast access to your data on the HP e3000. With Suprtool, you can perform many necessary DP functions easily, with just a few simple commands. At Robelle we are constantly working on your enhancement requests so that we can include them every year when we release an updated version of Suprtool.

Highlights in Suprtool 5.5.04

- Suprtool would not load data from a table when \$lookup was used in an if command and if the value did not need to be coerced to another type, Suprtool would sometimes not use the correct register location to do the compare.

Highlights in Suprtool 5.5.02

- There are no changes to the MPE version of Suprtool.

Highlights in Suprtool 5.5.01

- There are no changes to the MPE version of Suprtool.

Highlights in Suprtool 5.5

- Set XLTRIM On now tells Suprtool to close a file and release the disc space between EOF and the Flimit.
- STExport's Escape command has been re-engineered to fix some corner cases that didn't work previously.
- Due to an issue with Btrees, Suprtool would incorrectly select records when doing an update or delete, and if using chain with a btree index on a master dataset.
- The \$edit function did not work properly with alpha based edit masks and if the target was greater than 32 characters.
- Suprtool now treats KSAM64 files with labels as SD files, in the same manner as KSAMXL files are.

- A warning will print if a non-regular SD file is loaded into a Table with the data option. The data is not loaded into the table.
- An error will print if an extract command attempts to reference data when loaded from table that in turn was loaded when using a non-regular SD file, such as KSAM/XL, KSAM64 and CM KSAM.

Highlights in Suprtool 5.4.01

- Suprtool did not print out a warning message when attempting to combine sort with output,else.

Highlights in Suprtool 5.4

- Bradmark's DBGeneral can produce Jumbo datasets that are a single chunk, Suprtool did not handle these single chunk master jumbo datasets properly as the last block calculation was done only after opening the last chunk itself. We have adjusted the logic in making sure the calculation is done for this case earlier. Adager does not create these single chunk jumbo datasets. There is an undocumented \$control directive in dbschema called \$forcejumbo, which will produce one of these single chunk jumbos so we are supporting it in Suprtool 5.3.11.
- The Output command has been enhanced to accept the new verb "else", which when invoked it will write out the records that do not qualify and write them to an external file.
- Suprtool did not properly clear the data field information from a table at the end of a task.
- Suprtool did not properly zero out a packed field target when an table entry was not found when extracting data from a table.
- If \$lookup can now return the data portion loaded into a table to use in a comparison.
- STExport HTML command did not calculate the maximum record size properly in some cases.
- Suprtools prefetch default value has been changed from 2 to 0.

Known Problems

Set Itemlock does not work in one particular case.

Compatibility

Suprtool/iX is compatible with MPE V, MPE XL, and MPE/iX, including MPE/iX 6.5, 7.0 and MPE/iX 7.5.

Suprtools default prefetch value has been changed from 2 to zero.

Ksam64 files were not assumed to be Self-describing like CM KSAM and KSAMXL files when it was the input file and had labels.

A warning will print if a non-regular SD file is loaded into a Table with the data option.

An error will print if an extract command attempts to reference data when loaded from table that in turn was loaded when using a non-regular SD file, such as KSAM/XL, KSAM64 and CM KSAM.

CPU Serial Number and CPU Name (HPSUSAN & HPCPUNAME)

Suprtool and its associated products run only on CPUs whose serial numbers have been encoded ("showvar hpsusan" on MPE/iX). They also may be encoded with your HPCPUNAME values. If it fails to run and you get an "invalid HPCPUNAME" or "invalid HPSUSAN" error message, contact Robelle for assistance.

Documentation

The user manual contains the full description of all the Suprtool suite of products including Dbedit, Suprlink, STExport and Suprtool2, as well as usage tips and commands for each. The manuals are up-to-date with all the latest changes. To see only the changes in the latest version, see the "What's New" section of the manual, or see the change notice.

You can download our manuals and change notices in various formats and you can order printed (hardcopy) manuals from our web site at:

<http://www.robelle.com/library/manuals/>

Installation

Overview

We have two types of Installations, Tape and Download. We provide links to the Installation instructions on our web site for each type of Install.

Ecometry Users

Users of the Ecometry application need to use the installation instructions supplied by Ecometry Corporation. Those instructions have extra steps for updating the Ecometry code accounts.

You will find the Ecometry version of these instructions at <http://www.robelle.com/ecometry/>

Types of installations, tape, download combined qedit and suprtool tape.

Installation Instructions

If you received a production release tape from Robelle, then you can install using the instructions on this web page:

<http://www.robelle.com/support/install/tape/stpre.html>

If you downloaded the Suprtool production release from our web site then the instructions can be found here for the ftp download method:

<http://www.robelle.com/downloads/install-stpre-ftp.html>

and here for the WRQ download method:

<http://www.robelle.com/downloads/install-stpre-wrq.html>

Installation Assistance

If you have any questions about the upgrade process or run into any problems, please call us. Technical support is available on weekdays from 8 a.m. to 4 p.m. Pacific time at 800.453.8970 or you can e-mail your question to support@robelle.com.

Enhancements in Version 5.5

Introduction

Suprtool is constantly being updated with new features. The following section describes the new enhancements to Suprtool since Suprtool 5.4.

Set XLTRIM

Suprtool now has the command Set xltrim on, which tells Suprtool to close the output file in a manner in which it releases the disc space between EOF and the Flimit, but the Flimit remains the same. This trim will only occur if set squeeze is not set or if set squeeze is off.

Escape Command

STExports Escape command has been revised to be faster and a couple of corner cases.

Enhancements in Version 5.4

Introduction

Suprtool is constantly being updated with new features. The following section describes the new enhancements to Suprtool since Suprtool 5.3.

Get Command

Bradmark's Adager can produce Jumbo datasets that are a single chunk, Suprtool did not handle these single chunk master jumbo datasets properly as the last block calculation was done only after opening the last chunk itself. We have adjusted the logic in making sure the calculation is done for this case earlier. Adager does not create these single chunk jumbo datasets. There is an un-documented \$control directive in dbschema called \$forcejumbo, which will produce one of these single chunk jumbos so we are supporting it in Suprtool 5.3.11.

Output Command

The Output command has been enhanced to accept the new verb "else", which when invoked it will write out the records that do not qualify and write them to an external file.

Consider the following task:

```
base mydb
get customers
if custno >= "50A"
out mycusts,link,else
xeq
```

Suprtool will create two files one called mycusts and another called else which will be a temporary file. This works for flat files, Image (via get and chain) and KSAM files. The temporary ELSE file will NOT prompt if there is a duplicate. It will simply purge the file prior to creating the new temporary file. You can of course use file equations to re-direct the output to another named temporary file but the user is responsible for insuring that the file equated filename doesn't exist so that the write operation will work.

You cannot combine output ,else with the num or key options. In this case Suprtool will tell you it is ignoring the ,else operation. You cannot combine output,else with any of the dup or nodup options or the duplicate command. Suprtool will generate an error in this case.

Bugs Fixed

Bugs Fixed In Suprtool 5.5.04

If Table data lookup. Suprtool would not load data from a table when \$lookup was used in an if command and if the value did not need to be coerced to another type, Suprtool would sometimes not use the correct register location to do the compare.

Bugs Fixed In Suprtool 5.5

Ksam64 files. Ksam64 files were not assumed to be Self-describing like CM KSAM and KSAMXL files when it was the input file and had labels.

Sedit function. The \$sedit function did not work well with alpha based edit masks and if the target was greater than 32 characters.

Table File Data Load. A warning will print if a non-regular SD file is loaded into a Table with the data option. The data is not loaded into the table.

Table File Data Lookup. An error will print if an extract command attempts to reference data when loaded from table that in turn was loaded when using a non-regular SD file, such as KSAM/XL, KSAM64 and CM KSAM.

BTrees and Chain. Due to an issue with Btrees, Suprtool would incorrectly select records when doing an update or delete, and if using chain with a btree index on a master dataset.

Bugs Fixed In Suprtool 5.4.01

Output, Else. Suprtool would not print a warning when output,else was specified during a sort operation.

Bugs Fixed In Suprtool 5.3.11

GET Command. The Get command would get too many records if the dataset was a single chunk jumbo dataset. Only Dbgeneral and dbschemas \$forcejumbo can make these single chunk datasets.

Table Command. Suprtool did not properly clear the data field information from a table at the end of a task.

Extract from Table. Suprtool did not properly zero out a packed field target when an table entry was not found when extracting data from a table and the Packed field was P12 or higher.
