"I wrote the original host-based Qedit and have maintained it for over 20 years, but I am now totally converted to Qedit for Windows. I didn't realize how dependent on it I had become until I went back to add some new features to host-based Qedit and had trouble remembering the commands!"

Bob Green

PRESIDENT OF ROBELLE

"Qedit for Windows has greatly improved my productivity by allowing me to write Suprtool reports on the fly without the awkwardness of using Editor. Qedit is perfect for the user who would like to spend more time writing and less time maneuvering".

Users Love it:

"Qedit has become a staple at our institution because of the productivity boost we realize. The interface with our Unix system is transparent, and we toggle quickly between program code and testing. I use Qedit for quick file maintenance with the replace, insert and delete functions. I especially like the quick sort feature - I get into the directory I want, hit the 'Last Modified' button, and the files I need jump right to the top of the list."

"We've been using Qedit for Windows to edit MPE COBOL source code on our HP-3000, as well as accessing UNIX files on our HP-9000. It's been a huge time-saver on the 9000, because we no longer have to telnet into the box and vi the file - we just edit it right here on our PC's. We have an employee directory on our web site, which is driven from a flat CSV file. There are constant updates to the directory, and the time savings will pay for Qedit in the very short term."
